

BACK ALARM SWB-1

Voltage: **12-24 V DC** Volume: **min. 98 dB**

Why is it worth choosing SWB back alarms?

- ✓ They are simple and easy to install. Small dimension of device allows to install even in difficult to reach places.
- ✓ They dramatically improve safety when reversing by warning all persons behind the vehicle or in its immediate surroundings. In this way, the risk of an accident involving workers or bystanders is minimized.
- ✓ The type of sound emitted by sirens is clearly associated with an alarm (warning against danger) and cannot be ignored by a person directly in the danger zone.
- ✓ They are characterized by the highest quality and durability as they are produced from the best commercially available components. Moreover, with the appropriate use of epoxy resin, they are protected against moisture, dirt and vibration.
- ✓ They have gained recognition among many buyers and are now assembled in various kinds of trucks, vans, buses, agricultural machines and forklifts.
